

# Artichoke Agave

## Artichoke Agave *Agave parryi* var. *truncata*

Dense, symmetrical rosettes of wide blue-gray leaves are abundant, developing large clumps. The rosette from which the flower spike emerges dies after flowering, though the plant is perpetuated by "pups" or off-shoots. A bright accent in the water-wise landscape or a nice ground-cover when mass planted.

### CARE

Once established, needs only occasional watering

Full sun

ZONE : 6 - 9
